

Test Report issued under the responsibility of:

intertek
Total Quality. Assured.

**TEST REPORT
IEC 62109-1**

**Safety of Power Converter for use in Photovoltaic Power Systems
Part 1: General requirements**

Report Number..... : 230201452SHA-001

Date of issue..... : 2023-03-01

Total number of pages 89 Pages

Name of Testing Laboratory preparing the Report Intertek Testing Services Shanghai
Building No.86, 1198 Qinzhou Road (North), Shanghai 200233, China

Applicant's name Afore New Energy Technology (Shanghai) Co., Ltd.

Address..... Build No.7, 333 Wanfang Road, Minhang District, Shanghai. China. 201112

Test specification:

Standard IEC/EN 62109-1:2010 (First Edition)

Test procedure CE-LVD

Non-standard test method N/A

Test Report Form No. IEC62109_1B

Test Report Form(s) Originator.... VDE Testing and Certification Institute

Master TRF Dated 2016-04

General remarks:

The report only consider 230V 50Hz.

Low voltage electrical installations shall comply with national and local regulation.

"(See Enclosure #)" refers to additional information appended to the report.

"(See appended table)" refers to a table appended to the report.

Throughout this report a comma / point is used as the decimal separator.

Standard IEC 62109-2:2011 is to be used in conjunction with IEC 62109-1:2010.

The test results presented in this report relate only to the item tested. The results indicate that the specimen complies with standard" IEC 62109-1:2010 and IEC 62109-2:2011".

Determination of the test conclusion is based on IEC Guide 115 in consideration of measurement uncertainty.

This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

Manufacturer's Declaration per sub-clause 4.2.5 of IECEE 02:

The application for obtaining a CB Test Certificate includes more than one factory location and a declaration from the Manufacturer stating that the sample(s) submitted for evaluation is (are) representative of the products from each factory has been provided.....:

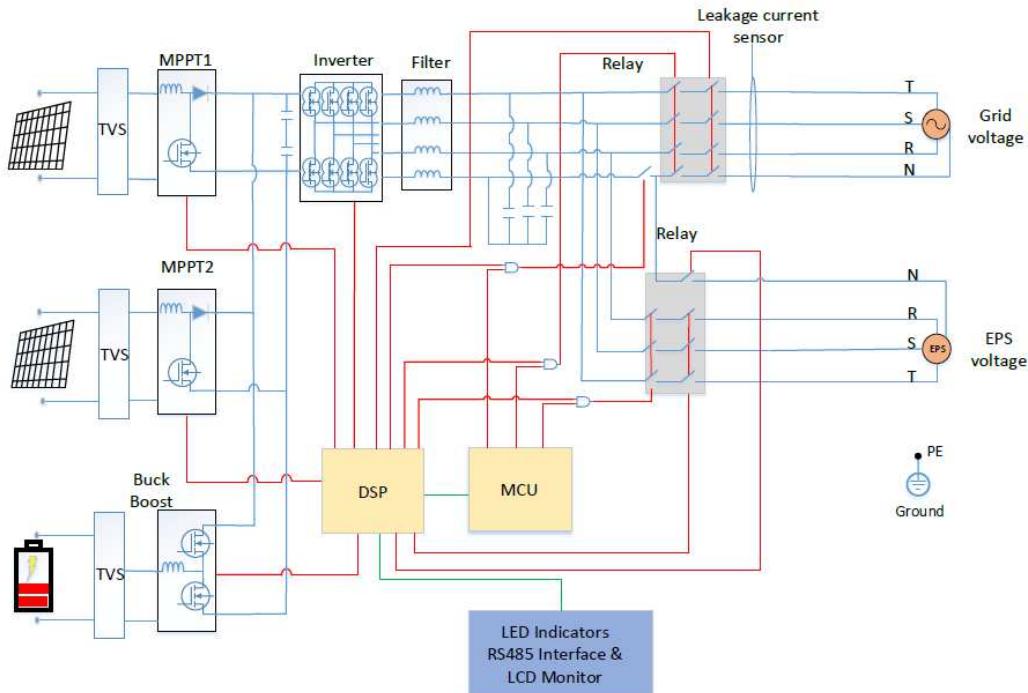

Yes
 Not applicable

When differences exist; they shall be identified in the General product information section.

Name and address of factory (ies): Afore New Energy Technology (Shanghai) Co., Ltd.
 Build No.7, 333 Wanfang Road, Minhang District,
 Shanghai. China. 201112

General product information:

The testing item is a Hybrid inverter for indoor or outdoor installation.
The Inverter is three-phase type and non-isolated between PV, BATT and AC output.
The internal control is redundantly built. It contains a main DSP and a slave DSP
PE terminal on external and internal enclosure.
The off grid port is grounding when the unit workings at stand alone mode by relay. The final used earth
system shall comply the local code requirement.
The inverter has adjustable power factor function. But the function is not available for this test report.
And The testing performed on typical model: Max power model.

Model difference:

All models have same circuit, PWB layout and software, and differences between models are output rating, PV input string number and fan number.

Model AF3K-TH, AF4K-TH, AF5K-TH, AF6K-TH, AF8K-TH, AF10K-TH, AF12K-TH, AF3K-THP, AF4K-THP, AF5K-THP, AF6K-THP, AF8K-THP, AF10K-THP, AF12K-THP have 2 MPPT trackers with 2 input strings.

Model AF15K-TH has 2MPPT trackers with 3 input strings, and model AF17K-TH, AF20K-TH, AF25K-TH, AF30K-TH have 2MPPT trackers with 4 input strings.

Model AF3K-TH, AF4K-TH, AF5K-TH, AF6K-TH, AF8K-TH, AF3K-THP, AF4K-THP, AF5K-THP, AF6K-THP, AF8K-THP have no external fan, and model AF10K-TH, AF12K-TH, AF10K-THP, AF12K-THP, AF15K-TH, AF17K-TH, AF20K-TH, AF25K-TH, AF30K-TH have 2 external fans and 1 internal fan.

The BAT port current of Model AF3K-TH, AF4K-TH, AF5K-TH, AF6K-TH, AF8K-TH, AF10K-TH, AF12K-TH is 30A, and the BAT port current of model AF3K-THP, AF4K-THP, AF5K-THP, AF6K-THP, AF8K-THP, AF10K-THP, AF12K-THP is 50A.

| 5 | MARKING AND DOCUMENTATION | | P |
| 5.1 | Marking | | P |
| 5.1.1 | General | Label is attached | P |
| | Equipment shall bear markings as specified in 5.1 and 5.2 | | P |
| | Graphic symbols may be used and shall be in accordance with Annex C or IEC 60417 as applicable. | | P |
| | Graphic symbols shall be explained in the documentation provided with the PCE. | | P |
| 5.1.2 | Durability of markings | | P |
| | Markings required by this clause to be located on the PCE shall remain clear and legible under conditions of NORMAL USE and resist the effects of cleaning agents specified by the manufacturer | | P |
| 5.1.3 | Identification | | P |
| | The equipment shall, as a minimum, be permanently marked with: | | P |
| | a) the name or trade mark of the manufacturer or supplier | see marking plate | P |
| | b) model number, name or other means to identify the equipment | see marking plate | P |
| | c) a serial number, code or other marking allowing identification of manufacturing location and the manufacturing batch or date within a three month time period. | see marking plate | P |
| 5.1.4 | Equipment ratings | | P |
| | Unless otherwise specified in another part of IEC 62109, the following ratings, as applicable shall be marked on the equipment: | | P |
| | – input voltage, type of voltage (a.c. or d.c.), frequency, and max. continuous current for each input | see marking plate | P |
| | – output voltage, type of voltage (a.c. or d.c.), frequency, max. continuous current, and for a.c. outputs, either the power or power factor for each output | see marking plate | P |

| IEC 62109-1 | | | |
|-------------|--|--|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | – the ingress protection (IP) rating as in 6.3 below | see marking plate (IP65) | P |
| 5.1.5 | Fuse identification | | P |
| | Marking shall be located adjacent to each fuse or fuseholder, or on the fuseholder, or in another location provided that it is obvious to which fuse the marking applies, giving the fuse current rating and where fuses of different voltage rating value could be fitted, the fuse voltage rating. | 750Vdc,100A | P |
| | Where fuses with special fusing characteristics such as time delay or breaking capacity are necessary, the type shall also be indicated | Interrupting 50kA | P |
| | For fuses not located in operator access areas and for soldered-in fuses located in operator access areas, it is permitted to provide an unambiguous cross-reference (for example, F1, F2, etc.) to the servicing instructions which shall contain the relevant information. | | P |
| 5.1.6 | Terminals, Connections, and Controls | | P |
| | If necessary for safety, an indication shall be given of the purpose of Terminals, connectors, controls, and indicators, and their various positions, including any connections for coolant fluids such as water and drainage. The symbols in Annex C may be used, and where there is insufficient space, symbol 9 of Annex C may be used. | Ground terminals are marked with relevant explanation. PV port with PV special connector AC port with special connector or terminals | P |
| | Push-buttons and actuators of emergency stop devices, and indicator lamps used only to indicate a warning of danger or the need for urgent action shall be coloured red. | No such components | N/A |
| | A multiple-voltage unit shall be marked to indicate the particular voltage for which it is set when shipped from the factory. The marking is allowed to be in the form of a paper tag or any other non-permanent material. | The PCE is not intended to connect to multiple-voltage and there is no voltage setting device | N/A |
| | A unit with d.c. terminals shall be plainly marked indicating the polarity of the connections, with: | PV port with PV special connector and with + - | P |
| | – the sign "+" for positive and "-" for negative; or | | P |
| | – a pictorial representation illustrating the proper polarity where the correct polarity can be unambiguously determined from the representation | | N/A |
| 5.1.6.1 | Protective Conductor Terminals | | P |
| | The means of connection for the protective earthing conductor shall be marked with: | | P |
| | – symbol 7 of Annex C; or | | P |
| | – the letters "PE "; or | | N/A |

| IEC 62109-1 | | | |
|-------------|--|--------------------------------------|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | <ul style="list-style-type: none"> – the colour coding green-yellow. | | P |
| 5.1.7 | Switches and circuit-breakers | | N/A |
| | The on and off-positions of switches and circuits breakers shall be clearly marked. If a push-button switch is used as the power switch, symbols 10 and 16 of Annex C may be used to indicate the on-position, or symbols 11 and 17 to indicate the off-position, with the pair of symbols (10 and 16, or 11 and 17) close together. | | N/A |
| 5.1.8 | Class II Equipment | Class I | N/A |
| | Equipment using Class II protective means throughout shall be marked with symbol 12 of Annex C. Equipment which is only partially protected by DOUBLE INSULATION or REINFORCED INSULATION shall not bear symbol 12 of Table Annex C. | | N/A |
| | Where such equipment has provision for the connection of an earthing conductor for functional reasons (see 7.3.6.4) it shall be marked with symbol 6 of Annex C | | N/A |
| 5.1.9 | Terminal boxes for External Connections | | P |
| | Where required by note 1 of Table 2 as a result of high temperatures of terminals or parts in the wiring compartment, there shall be a marking, visible beside the terminal before connection, of either: | | N/A |
| | a) the minimum temperature Rating and size of the cable to be connected to the TERMINALS; or | | N/A |
| | b) a marking to warn the installer to consult the installation instruction. Symbol 9 of Table D-1 is an acceptable marking | | P |
| 5.2 | Warning markings | | P |
| 5.2.1 | Visibility and legibility requirements for warning markings | Warning marking marked on enclosure. | P |
| | Warning markings shall be legible, and shall have minimum dimensions as follows: | | P |
| | <ul style="list-style-type: none"> – Printed symbols shall be at least 2,75 mm high | | P |
| | <ul style="list-style-type: none"> – Printed text characters shall be at least 1.5 mm high and shall contrast in colour with the background | | P |
| | <ul style="list-style-type: none"> – Symbols or text that are moulded, stamped or engraved in a material shall have a character height of at least 2,0 mm, and if not contrasting in colour from the background, shall have a depth or raised height of at least 0,5 mm. | | P |

| IEC 62109-1 | | | |
|-------------|--|-------------------------|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | If it is necessary to refer to the instruction manual to preserve the protection afforded by the equipment, the equipment shall be marked with symbol 9 of Annex C | | P |
| | Symbol 9 of Annex C is not required to be used adjacent to symbols that are explained in the manual | | P |
| 5.2.2 | Content for warning markings | | P |
| 5.2.2.1 | Ungrounded heat sinks and similar parts | No ungrounded heat sink | N/A |
| | An ungrounded heat sink or other part that may be mistaken for a grounded part and involves a risk of electric shock in accordance with 7.3 shall be marked with symbol 13 of Annex C, or equivalent. The marking may be on or adjacent to the heat sink and shall be clearly visible when the PCE is disassembled to the extent that a risk of contact with the heat sink exists. | | N/A |
| 5.2.2.2 | Hot Surfaces | | P |
| | A part of the PCE that exceeds the temperature limits specified in 4.3.2 shall be marked with symbol 14 of Annex C or equivalent. | | P |
| 5.2.2.3 | Coolant | No coolant used | N/A |
| | A unit containing coolant that exceeds 70 °C shall be legibly marked externally where readily visible after installation with symbol 15 of Annex C. The documentation shall provide a warning regarding the risk of burns from hot coolant, and either: | | N/A |
| | a) statement that coolant system servicing is to be done only by SERVICE PERSONNEL, or | | N/A |
| | b) instructions for safe venting, draining, or otherwise working on the cooling system, if these operations can be performed without OPERATOR access to HAZARDS internal to the equipment | | N/A |
| 5.2.2.4 | Stored energy | | P |
| | Where required by 7.3.9.2 or 7.4.2 the PCE shall be marked with Symbol 21 of Annex C and the time to discharge capacitors to safe voltage and energy levels shall accompany the symbol. | | P |
| 5.2.2.5 | Motor guarding | | P |
| | Where required by 8.2 a marking shall be provided where it is visible to service personnel before removal of a guard, warning of the hazard and giving instructions for safe servicing (for example disconnection of the source before removing the guard). | | N/A |
| 5.2.3 | Sonic hazard markings and instructions | | N/A |
| | If required by 10.2.1 a PCE shall: | | N/A |

| IEC 62109-1 | | | |
|-------------|---|---------------------------------|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | a) be marked to warn the operator of the sonic pressure hazard; or | | N/A |
| | b) be provided with installation instructions that specify how the installer can ensure that the sound pressure level from equipment at its point of use after installation, will not reach a value, which could cause a hazard. These instructions shall include the measured sound pressure level, and shall identify readily available and practicable protective materials or measures which may be used. | | N/A |
| 5.2.4 | Equipment with multiple sources of supply | | P |
| | A PCE with connections for multiple energy sources shall be marked with symbol 13 of Annex C and the manual shall contain the information required in 5.3.4. | PV array, AC MAINS | P |
| | The symbol shall be located on the outside of the unit or shall be prominently visible behind any cover giving access to hazardous parts. | | P |
| 5.2.5 | Excessive touch current | | N/A |
| | Where required by 7.3.6.3.7 the PCE shall be marked with symbol 15 of Annex C. See also 5.3.2 for information to be provided in the installation manual. | | N/A |
| 5.3 | Documentation | | P |
| 5.3.1 | General | | P |
| | The documentation provided with the PCE shall provide the information needed for the safe operation, installation, and (where applicable) maintenance of the equipment. The documentation shall include the items required in 5.3.2 through 5.3.4, and the following: | | P |
| | a) explanations of equipment makings, including symbols used | | P |
| | b) location and function of terminals and controls | | P |
| | c) all ratings or specifications that are necessary to safely install and operate the PCE, including the following environmental ratings along with an explanation of their meaning and any resulting installation requirements: | | P |
| | – ENVIRONMENTAL CATEGORY as per 6.1 | For outdoor use | P |
| | – WET LOCATIONS classification for the intended external environment as per 6.1 | Wet Locations | P |
| | – POLLUTION DEGREE classification for the intended external environment as per 6.2 | PD3(external), PD2(internal) | P |
| | – INGRESS PROTECTION rating as per 6.3 | IP65 | P |

| IEC 62109-1 | | | |
|-------------|---|---|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | <ul style="list-style-type: none"> – Ambient temperature and relative humidity ratings | -25°C to 60°C 0-100 % condensing | P |
| | <ul style="list-style-type: none"> – MAXIMUM altitude rating | | P |
| | <ul style="list-style-type: none"> – OVERVOLTAGE CATEGORY assigned to each input and output port as per 7.3.7.1.2, accompanied by guidance regarding how to ensure that the installation complies with the required overvoltage categories; | PV: II Mains: III | P |
| | d) a warning that when the photovoltaic array is exposed to light, it supplies a d.c. voltage to the PCE | | P |
| 5.3.1.1 | Language | English | P |
| | Instructions related to safety shall be in a language that is acceptable in the country where the equipment is to be installed. | | P |
| 5.3.1.2 | Format | | P |
| | In general, the documentation must be provided in printed form and is to be delivered with the equipment. | Printed form provided | P |
| | For equipment which requires the use of a computer for both installation and operation, documentation may be provided in electronic format without accompanying printed format. | | N/A |
| 5.3.2 | Information related to installation | | P |
| | The documentation shall include installation and where applicable, specific commissioning instructions and, if necessary for safety, warnings against hazards which could arise during installation or commissioning of the equipment. The information provided shall include: | As specified in user manual, refer to information related to installation | P |
| | a) assembly, location, and mounting requirements: | | P |
| | b) ratings and means of connection to each source of supply and any requirements related to wiring and external controls, colour coding of leads, disconnection means, or overcurrent protection needed, including instructions that the installation position shall not prevent access to the disconnection means; | | P |
| | c) ratings and means of connection of any outputs from the PCE, and any requirements related to wiring and external controls, colour coding of leads, or overcurrent protection needed; | | P |
| | d) explanation of the pin-out of connectors for external connections, unless the connector is used for a standard purpose (e.g. RS 232) | | P |
| | e) ventilation requirements; | | P |

| IEC 62109-1 | | | |
|-------------|---|---|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | The discharging energy available between simultaneously accessible parts protected by protective impedance shall not exceed the charging voltage and capacitance limits given in Table 9, which applies to both wet and dry locations, under normal and single fault conditions. Refer to figure 8. | | N/A |
| 7.3.5.4 | Protection by means of limited voltages | | N/A |
| | That portion of a circuit that has its voltage reduced to DVC-A by a voltage divider that complies with the following requirements, and that is otherwise provided with protective separation from circuits of DVC-B or DVC-C according to 7.3.3, does not require protection against direct contact. | | N/A |
| | The voltage divider shall be designed so that under normal and single fault conditions, including faults in the voltage division circuit, the voltage across the output of the voltage divider does not exceed the limit for DVC-A. | | N/A |
| | This type of protection shall not be used in case of protective class II or unearthed circuits, because it relies on protective earth being connected. | | N/A |
| 7.3.6 | Protection against indirect contact | | P |
| 7.3.6.1 | General | | P |
| | Protection against indirect contact is required to prevent shock-hazardous current being accessible from conductive parts during an insulation failure. This protection shall comply with the requirements for protective class I (basic insulation plus protective earthing), class II (double or reinforced insulation) or class III (limitation of voltages) | Class I (basic insulation plus protective earthing) Class II part (Communication circuit of SELV): reinforced insulation | P |
| | That part of a PCE meets the requirements of 7.3.6.2 and 7.3.6.3 is defined as protective class I | The earthed metal enclosure meets this requirement | P |
| | That part of a PCE meets the requirements of 7.3.6.4 is defined as protective class II. | | P |
| | That part of PCE which meets the requirements of decisive voltage class A and in which no hazardous voltages are derived, is defined as protective class III. No shock hazard is present in such circuits. | | P |
| | Where protection against indirect contact is dependent on means provided during installation, the installation instructions shall provide details of the required means and shall indicate the associated hazards. | | N/A |
| 7.3.6.2 | Insulation between live parts and accessible conductive parts | | P |

| IEC 62109-1 | | | |
|-------------|--|---|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | Accessible conductive parts of equipment shall be separated from live parts by insulation meeting the requirements of Table 7 or by clearances as specified in 7.3.7.4 and creepages as specified in 7.3.7.5 | | P |
| 7.3.6.3 | Protective class I – Protective bonding and earthing | | P |
| 7.3.6.3.1 | General | | P |
| | Equipment of protective class I shall be provided with protective earthing, and with protective bonding to ensure electrical contact between accessible conductive parts and the means of connection for the external protective earthing conductor, except bonding is not required for: | PE arrangement: external protective earthing is provided through approved AC installation connector, and an external second protective earthing conductor is bonded to metal case | P |
| | a) accessible conductive parts that are protected by one of the measures in 7.3.5.2 to 7.3.5.4, or | | P |
| | b) accessible conductive parts are separated from live parts of DVC-B or -C using double or reinforced insulation. | | P |
| 7.3.6.3.2 | Requirements for protective bonding | | P |
| | Electrical contact with the means of connection of the external protective earthing conductor shall be achieved by one or more of the following means: | | P |
| | a) through direct metallic contact; | | P |
| | b) through other conductive parts which are not removed when the PCE or sub-units are used as intended; | | N/A |
| | c) through a dedicated protective bonding conductor; | | P |
| | d) through other metallic components of the PCE | | N/A |
| | Where direct metallic contact is used and one or both of the parts involved is painted or coated, the paint or coating shall be removed in the area of contact, or reliably penetrated, to ensure metal to metal contact. | No coating | P |
| | For moving or removable parts, hinges or sliding contacts designed and maintained to have a low resistance are examples of acceptable means if they comply with the requirements of 7.3.6.3.3. | No such part | N/A |
| | Metal ducts of flexible or rigid construction and metallic sheaths shall not be used as protective bonding conductors, unless the device or material has been investigated as suitable for protective bonding purposes. | | N/A |
| 7.3.6.3.3 | Rating of protective bonding | | P |

| IEC 62109-1 | | | |
|-------------|---|--|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | <p>Protective bonding shall withstand the highest thermal and dynamic stresses that can occur to the PCE item(s) concerned when they are subjected to a fault connecting live parts to accessible conductive parts.</p> <p>The protective bonding shall remain effective for as long as a fault to the accessible conductive parts persists or until an upstream protective device removes power from the part.</p> | | P |
| | Protective bonding shall meet following requirements: | | P |
| | a) For PCE with an overcurrent protective device rating of 16 A or less, the impedance of the protective bonding means shall not exceed 0.1Ω during or at the end of the test below. | | N/A |
| | b) For PCE with an overcurrent protective device rating of more than 16 A, the voltage drop in the protective bonding test shall not exceed 2.5 V during or at the end of the test below. | Max.0.33V | P |
| | As alternative to a) and b) the protective bonding may be designed according to the requirements for the external protective earthing conductor in 7.3.6.3.5, in which case no testing is required. | Protective bonding wire size is same as output cable | P |
| | The impedance of protective bonding means shall be checked by passing a test current through the bond for a period of time as specified below. The test current is based on the rating of the overcurrent protection for the equipment or part of the equipment under consideration, as follows: | | P |
| | a) For pluggable equipment type A, the overcurrent protective device is that provided external to the equipment (for example, in the building wiring, in the mains plug or in an equipment rack); | | N/A |
| | b) For pluggable equipment type B and fixed equipment, the maximum rating of the overcurrent protective device specified in the equipment installation instructions to be provided external to the equipment; | | P |
| | c) For a circuit or part of the equipment for which an overcurrent protective device is provided as part of the equipment, the rating of the provided overcurrent device. | | N/A |

| IEC 62109-1 | | | |
|-------------|--|------------------------------|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | Voltages are measured from the protective earthing terminal to all parts whose protective bonding means are being considered. The impedance of the protective earthing conductor is not included in the measurement. However, if the protective earthing conductor is supplied with the equipment, it is permitted to include the conductor in the test circuit but the measurement of the voltage drop is made only from the main protective earthing terminal to the accessible part required to be earthed. | | P |
| | On equipment where the protective earth connection to a subassembly or to a separate unit is part of a cable that also supplies power to that subassembly or unit, the resistance of the protective bonding conductor in that cable is not included in the protective bond impedance measurements for the subassembly or separate unit, as shown in Figure 11. However, this option is only permitted if the cable is protected by a suitably rated protective device that takes into account the size of the conductor. Otherwise the impedance of the protective bonding conductor between the separate units is to be included, by measuring to the protective earthing terminal where the power source enters the first unit in the system, as shown in Figure 12. | | P |
| 7.3.6.3.3.1 | Test current, duration, and acceptance criteria | | P |
| | The test current, duration of the test and acceptance criteria are as follows: | see appended table 7.3.6.3.3 | P |
| | a) For PCE with an overcurrent protective device rating of 16 A or less, the test current is 200% of the overcurrent protective device rating, but not less than 32 A, applied for 120s. The impedance of the protective bonding means during and at the end of the test shall not exceed 0,1 Ω. | | P |
| | b) For PCE with an overcurrent protective device rating of more than 16 A, the test current is 200% of the overcurrent protective device rating and the duration of the test is as shown in Table 10 below. The voltage drop in the protective bonding means, during and at the end of the test, shall not exceed 2,5 V. | | P |
| | c) During and after the test, there shall be no melting, loosening, or other damage that would impair the effectiveness of the protective bonding means. | | P |
| | The test current is derived from an a.c or d.c supply source, the output of which is not earthed. | | P |

| IEC 62109-1 | | | |
|-------------|---|------------------------|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | As an alternative to Table 10, where the time-current characteristic of the overcurrent protective device that limits the fault current in the protective bonding means is known because the device is either provided in the equipment or fully specified in the installation instructions, the test duration may be based on that specific device's time-current characteristic. The tests are conducted for a duration corresponding to the 200% current value on the time-current characteristic. | | N/A |
| 7.3.6.3.4 | Protective bonding impedance (routine test) | | N/A |
| | If the continuity of the protective bonding is achieved at any point by a single means only (for example a single conductor or single fastener), or if the PCE is assembled at the installation location, then the impedance of the protective bonding shall also be tested as a routine test. The test shall be as in 7.3.6.3.3, except for the following: | | N/A |
| | <ul style="list-style-type: none"> ▪ the test current may be reduced to any convenient value greater than 10 A sufficient to allow measurement or calculation of the impedance of the protective bonding means: | | N/A |
| | <ul style="list-style-type: none"> ▪ the test duration may be reduced to no less than 2 s | | N/A |
| | For equipment subject to the type test in 7.3.6.3.3.1a), the impedance during the routine test shall not exceed 0,1Ω. | | N/A |
| | For equipment subject to the type test in 7.3.6.3.3.1b) the impedance during the routine test shall not exceed 2,5 V divided by the test current required by 7.3.6.3.3.1b). | | N/A |
| 7.3.6.3.5 | External protective earthing conductor | | P |
| | A protective earthing conductor shall be connected at all times when power is supplied to PCE of protective class I. Unless local wiring regulations state otherwise, the protective earthing conductor cross-sectional area shall be determined from Table 11 or by calculation according to IEC 60364-5-54. | | P |
| | If the external protective earthing conductor is routed through a plug and socket or similar means of disconnection, it shall not be possible to disconnect it unless power is simultaneously removed from the part to be protected. | | P |
| | The cross-sectional area of every external protective earthing conductor which does not form part of the supply cable or cable enclosure shall, in any case, be not less than: | Connector on enclosure | P |
| | <ul style="list-style-type: none"> ▪ 2,5 mm² if mechanical protection is provided; | | P |

| IEC 62109-1 | | | |

| 7.3.7.8.2 | Requirements for electrical withstand capability of solid insulation | | P |
| 7.3.7.8.2.1 | Basic, supplemental, reinforced, and double insulation | | P |
| 7.3.7.8.2.2 | Functional insulation | | P |
| 7.3.7.8.3 | Thin sheet or tape material | | P |
| 7.3.7.8.3.1 | General | | P |
| 7.3.7.8.3.2 | Material thickness not less than 0,2 mm | | P |
| 7.3.7.8.3.3 | Material thickness less than 0,2 mm | | P |
| 7.3.7.8.3.4 | Compliance | | P |
| 7.3.7.8.4 | Printed wiring boards | UL 94, V-0 | P |
| 7.3.7.8.4.1 | General | | P |
| 7.3.7.8.4.2 | Use of coating materials | No coating material | N/A |
| 7.3.7.8.5 | Wound components | | N/A |
| 7.3.7.8.6 | Potting materials | | N/A |
| 7.3.7.9 | Insulation requirements above 30 kHz | | N/A |
| 7.3.8 | Residual Current-operated protective (RCD) or monitoring (RCM) device compatibility | Should be comply with local national code | N/A |
| | RCD and RCM are used to provide protection against insulation faults in some domestic and industrial installations, additional to that provided by the installed equipment. | | N/A |
| 7.3.9 | Capacitor discharge | | P |
| 7.3.9.1 | Operator access area | | P |
| | Equipment shall be so designed that there is no risk of electric shock in operator access areas from charge stored on capacitors after disconnection of the PCE. | Approved installation coupler use. Accessible communication interface is DVC A (< 30VDC) | P |
| 7.3.9.2 | Service access areas | | P |

| IEC 62109-1 | | | |
|-------------|---|--|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | Capacitors located behind panels that are removable for servicing, installation, or disconnection shall present no risk of electric shock or energy hazard from charge stored on capacitors after disconnection of the PCE. | Warning symbol 21 of Annex C is marked on PCE. | P |
| 7.4 | Protection against energy hazards | | P |
| 7.4.1 | Determination of hazardous energy level | | P |
| | A hazardous energy level is considered to exist if | | P |
| | a) The voltage is 2 V or more, and power available after 60 s exceeds 240 VA. | Access to internal power circuit, tool required. | P |
| | b) The stored energy in a capacitor is at a voltage. U of 2 V or more, and the stored energy. E, calculated from the following equation, exceeds 20J: $E = 0,5 CU^2$ | | P |
| 7.4.2 | Operator Access Areas | | P |
| | Equipment shall be so designed that there is no risk of energy hazard in operator access areas from accessible circuits. | No energy exists in operator access areas | P |
| 7.4.3 | Services Access Areas | | P |
| 7.5 | Electrical tests related to shock hazard | (see appended table 7.5) | P |
| 7.5.1 | Impulse voltage test (type test) | | P |
| 7.5.2 | Voltage test (dielectric strength test) | | P |
| 7.5.2.1 | Purpose of test | | P |
| 7.5.2.2 | Value and type of test voltage | | P |
| 7.5.2.3 | Humidity pre-conditioning | RH 93%, 40°C, 48 hours | P |
| 7.5.2.4 | Performing the voltage test | Output circuit to input circuit and enclosure | P |
| 7.5.2.5 | Duration of the a.c. or d.c. voltage test | 60s | P |
| 7.5.2.6 | Verification of the a.c. or d.c. voltage test | | P |
| 7.5.3 | Partial discharge test | See appended table 7.5 | N/A |
| 7.5.4 | Touch current measurement (type test) | See appended table 7.5.4 | N/A |
| | The touch current shall be measured if required by 7.3.6.3.7 and shall not be greater than 3.5 mA a.c. or 10 mA d.c. or special measures of protection as given in 7.3.6.3.7 are required. | See 7.3.6.3.7 | N/A |
| | For type tests on PCE for which wet locations requirements apply according to 6.1, the humidity pre-conditioning of 4.5 shall be performed immediately prior to the touch current test. | | N/A |

| IEC 62109-1 | | | |
|-------------|--|--|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| 7.5.5 | Equipment with multiple sources of supply | Hazards do not present under normal or single fault conditions | P |
| 8 | PROTECTION AGAINST MECHANICAL HAZARDS | | P |
| 8.1 | General | | P |
| | Operation shall not lead to a mechanical HAZARD in NORMAL CONDITION or SINGLE FAULT CONDITION. Edges, projections, corners, openings, guards, handles and the like, that are accessible to the operator shall be smooth and rounded so as not to cause injury during normal use of the equipment. | | P |
| | Conformity is checked as specified in 8.2 to 8.6. | | P |
| 8.2 | Moving parts | | P |
| | Moving parts shall not be able to crush, cut or pierce parts of the body of an OPERATOR likely to contact them, nor severely pinch the OPERATOR's skin. Hazardous moving parts of equipment, that is moving parts which have the potential to cause injury, shall be so arranged, enclosed or guarded as to provide adequate protection against the risk of personal injury. | | P |
| 8.2.1 | Protection of service persons | | N/A |
| | Protection shall be provided such that unintentional contact with hazardous moving parts is unlikely during servicing operations. If a guard over a hazardous moving part may need to be removed for servicing, the marking of symbol 15 of Table D-1 shall be applied on or near the guard. | | N/A |
| 8.3 | Stability | | N/A |
| | Equipment and assemblies of equipment not secured to the building structure before operation shall be physically stable in NORMAL USE. | Wall mounting | N/A |
| 8.4 | Provisions for lifting and carrying | Maximum 36 kg | N/A |
| | If carrying handles or grips are fitted to, or supplied with, the equipment, they shall be capable of withstanding a force of four times the weight of the equipment. | No such parts | N/A |
| | Equipment or parts having a mass of 18 kg or more shall be provided with a means for lifting and carrying or directions shall be given in the manufacturer's documentation. | | P |
| 8.5 | Wall mounting | | P |
| | Mounting brackets on equipment intended to be mounted on a wall or ceiling shall withstand a force of four times the weight of the equipment. | | P |

| IEC 62109-1 | | | |
|-------------|--|--|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| 8.6 | Expelled parts | | N/A |
| | Equipment shall contain or limit the energy of parts that could cause a HAZARD if expelled in the event of a fault. | | N/A |
| 9 | PROTECTION AGAINST FIRE HAZARDS | | P |
| 9.1 | Resistance to fire | | P |
| | This subclause specifies requirements intended to reduce the risk of ignition and the spread of flame, both within the equipment and to the outside, by the appropriate use of materials and components and by suitable construction. | Components are witnessed at normal condition and abnormal tests are verified | P |
| 9.1.1 | Reducing the risk of ignition and spread of flame | | P |
| | For equipment or a portion of equipment, there are two alternative methods of providing protection against ignition and spread of flame that could affect materials, wiring, wound components and electronic components such as integrated circuits, transistors, thyristors, diodes, resistors and capacitors. | Method 1 | P |
| 9.1.2 | Conditions for a fire enclosure | | P |
| | A FIRE ENCLOSURE is required for equipment or parts of equipment for which Method 2 is not fully applied and complied with. | | P |
| 9.1.2.1 | Parts requiring a fire enclosure | | P |
| | Except where Method 2 is used, or as permitted in 9.1.2.2, the following are considered to have a risk of ignition and, therefore, require a FIRE ENCLOSURE: | | P |
| | – components in PRIMARY CIRCUITS | | P |
| | – components in SECONDARY CIRCUITS supplied by power sources which exceed the limits for a LIMITED POWER SOURCE as specified in 9.2; | | N/A |
| | – components in SECONDARY CIRCUITS supplied by a LIMITED POWER SOURCE as specified in 9.2, but not mounted on a material of FLAMMABILITY CLASS V-1; | | N/A |
| | – components within a power supply unit or assembly having a limited power output complying with the criteria for a LIMITED POWER SOURCE as specified in 9.2, including overcurrent protective devices, limiting impedances, regulating networks and wiring, up to the point where the LIMITED POWER SOURCE output criteria are met; | | N/A |

| IEC 62109-1 | | | |
|-------------|--|--|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | – components having unenclosed arcing parts, such as open switch and relay contacts and commutators, in a circuit at HAZARDOUS VOLTAGE or at a HAZARDOUS ENERGY LEVEL; and | | N/A |
| | – insulated wiring, except as permitted in 9.1.2.2. | | N/A |
| 9.1.2.2 | Parts not requiring a fire enclosure | Fire enclosure used | N/A |
| 9.1.3 | Materials requirements for protection against fire hazard | | P |
| 9.1.3.1 | General | | P |
| | ENCLOSURES, components and other parts shall be so constructed, or shall make use of such materials, that the propagation of fire is limited. | Metal enclosure | P |
| 9.1.3.2 | Materials for fire enclosures | Metal enclosure | P |
| | If an enclosure material is not classified as specified below, a test may be performed on the final enclosure or part of the enclosure, in which case the material shall additionally be subjected to periodic SAMPLE testing. | | N/A |
| 9.1.3.3 | Materials for components and other parts outside fire enclosures | | P |
| | Except as otherwise noted below, materials for components and other parts (including MECHANICAL ENCLOSURES, ELECTRICAL ENCLOSURES and DECORATIVE PARTS); located outside FIRE ENCLOSURES, shall be of FLAMMABILITY CLASS HB. | | P |
| 9.1.3.4 | Materials for components and other parts inside fire enclosures | All internal components are rated V-2 or better or mounted on PCB rated V-0. | P |
| 9.1.3.5 | Materials for air filter assemblies | No such part | N/A |
| 9.1.4 | Openings in fire enclosures | Without openings | N/A |
| 9.1.4.1 | General | | N/A |
| | For equipment that is intended to be used or installed in more than one orientation as specified in the product documentation, the following requirements apply in each orientation. | | N/A |
| | These requirements are in addition to those in the following sections: | | N/A |
| | – 7.3.4, Protection against direct contact; | | N/A |
| | – 7.4, Protection against energy hazards; | | N/A |
| | – 13.5, Openings in enclosures | | N/A |
| 9.1.4.2 | Side openings treated as bottom openings | | N/A |
| 9.1.4.3 | Openings in the bottom of a fire enclosure | | N/A |

| IEC 62109-1 | | | |
|-------------|---|------------------------|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | The bottom of a FIRE ENCLOSURE or individual barriers, shall provide protection against emission of flaming or molten material under all internal parts, including partially enclosed components or assemblies, for which Method 2 of 9.1.1 has not been fully applied and complied with. | | N/A |
| 9.1.4.4 | Equipment for use in a CLOSED ELECTRICAL OPERATING AREA | | N/A |
| | The requirements of 9.1.4.3 do not apply to FIXED EQUIPMENT intended only for use in a CLOSED ELECTRICAL OPERATING AREA and to be mounted on a concrete floor or other non-combustible surface. Such equipment shall be marked as follows: | | N/A |
| | WARNING: FIRE HAZARD SUITABLE FOR MOUNTING ON CONCRETE OR OTHER NON-COMBUSTIBLE SURFACE ONLY | | N/A |
| 9.1.4.5 | Doors or covers in fire enclosures | | N/A |
| 9.1.4.6 | Additional requirements for openings in transportable equipment | | N/A |
| 9.2 | LIMITED POWER SOURCES | | N/A |
| 9.2.1 | General | | N/A |
| 9.2.2 | Limited power source tests | See appended table 9.2 | N/A |
| 9.3 | Short-circuit and overcurrent protection | | P |
| 9.3.1 | General | | P |
| | The PCE shall not present a hazard, under short-circuit or overcurrent conditions at any port, including phase-to-phase, phase-to-earth and phase-to-neutral, and adequate information shall be provided to allow proper selection of external wiring and external protective devices. | | P |
| 9.3.2 | Protection against short-circuits and overcurrent shall be provided for all input circuits, and for output circuits that do not comply with the requirements for limited power sources in 9.2, except for circuits in which no overcurrent hazard is presented by short-circuits and overloads. | | P |

| IEC 62109-1 | | | |
|-------------|---|------------------------------|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| 9.3.3 | Protective devices provided or specified shall have adequate breaking capacity to interrupt the maximum short circuit current specified for the port to which they are connected. If protection that is provided integral to the PCE for an input port is not rated for the short-circuit current of the circuit in which it is used, the installation instructions shall specify that an upstream protective device, rated for the prospective short-circuit current of that port, shall be used to provide backup protection. | | P |
| 10 | PROTECTION AGAINST SONIC PRESSURE HAZARDS | | N/A |
| 10.1 | General | | N/A |
| | The equipment shall provide protection against the effect of sonic pressure. Conformity tests are carried out if the equipment is likely to cause such HAZARDS. | No sonic pressure hazards | N/A |
| 10.2 | Sonic pressure and Sound level | | N/A |
| 10.2.1 | Hazardous Noise Levels | | N/A |
| 11 | PROTECTION AGAINST LIQUID HAZARDS | | N/A |
| 11.1 | Liquid Containment, Pressure and Leakage | No liquid containment system | N/A |
| | The liquid containment system components shall be compatible with the liquid to be used. | | N/A |
| | There shall be no leakage of liquid onto live parts as a result of: | | N/A |
| | a) Normal operation, including condensation; | | N/A |
| | b) Servicing of the equipment; or | | N/A |
| | c) Inadvertent loosening or detachment of hoses or other cooling system parts over time. | | N/A |
| 11.2 | Fluid pressure and leakage | | N/A |
| 11.2.1 | Maximum pressure | | N/A |
| 11.2.2 | Leakage from parts | | N/A |
| 11.2.3 | Overpressure safety device | | N/A |
| 11.3 | Oil and grease | | N/A |
| 12 | CHEMICAL HAZARDS | | N/A |
| 12.1 | General | | N/A |
| 13 | PHYSICAL REQUIREMENTS | | P |
| 13.1 | Handles and manual controls | | P |

| IEC 62109-1 | | | |
|-------------|---|---|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | Handles, knobs, grips, levers and the like shall be reliably fixed so that they will not work loose in normal use, if this might result in a hazard. Sealing compounds and the like, other than self-hardening resins, shall not be used to prevent loosening. If handles, knobs and the like are used to indicate the position of switches or similar components, it shall not be possible to fix them in a wrong position if this might result in hazard. | | N/A |
| 13.1.1 | Adjustable controls | Without adjustable controls | N/A |
| 13.2 | Securing of parts | All screws locked with starwasher | P |
| 13.3 | Provisions for external connections | | P |
| 13.3.1 | General | Certified PV connectors are used. Installation manuals provide information for the disconnection means. | P |
| 13.3.2 | Connection to an a.c. Mains supply | Approved AC connectors and terminals | P |
| 13.3.2.1 | General | | P |
| | For safe and reliable connection to a MAINS supply, equipment shall be provided with one of the following: | | P |
| | – terminals or leads or a non-detachable power supply cord for permanent connection to the supply; or | Approved AC connectors and terminals | P |
| | – a non-detachable power supply cord for connection to the supply by means of a plug | | N/A |
| | – an appliance inlet for connection of a detachable power supply cord; or | | N/A |
| | – a mains plug that is part of direct plug-in equipment as in 13.3.8 | | N/A |
| 13.3.2.2 | Permanently connected equipment | | P |
| 13.3.2.3 | Appliance inlets | | N/A |
| 13.3.2.4 | Power supply cord | | N/A |
| 13.3.2.5 | Cord anchorages and strain relief | | N/A |
| | For equipment with a non-detachable power supply cord, a cord anchorage shall be supplied such that: | | N/A |
| | – the connecting points of the cord conductors are relieved from strain; and | | N/A |
| | – the outer covering of the cord is protected from abrasion. | | N/A |
| 13.3.2.6 | Protection against mechanical damage | | P |

| IEC 62109-1 | | | |
|-------------|---|--|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| 13.3.3 | Wiring terminals for connection of external conductors | Approved AC connectors and terminals | N/A |
| 13.3.3.1 | Wiring terminals | | N/A |
| 13.3.3.2 | Screw terminals | | N/A |
| 13.3.3.3 | Wiring terminal sizes | | N/A |
| 13.3.3.4 | Wiring terminal design | | N/A |
| 13.3.3.5 | Grouping of wiring terminals | | N/A |
| 13.3.3.6 | Stranded wire | | N/A |
| 13.3.4 | Supply wiring space | | N/A |
| 13.3.5 | Wire bending space for wires 10 mm ² and greater | | N/A |
| 13.3.6 | Disconnection from supply sources | Disconnect the unit from the MAINS and PV supply by the external customer installed disconnecting devices. | P |
| 13.3.7 | Connectors, plugs and sockets | Approved PV connectors AND AC connectors or terminals used | P |
| 13.3.8 | Direct plug-in equipment | | N/A |
| 13.4 | Internal wiring and connections | | P |
| 13.4.1 | General | | P |
| 13.4.2 | Routing | Internal wire is routed to avoid sharp edge and overheat | P |
| 13.4.3 | Colour coding | Conductor having green-and-yellow insulation is used only for protective bonding connection | P |
| 13.4.4 | Splices and connections | | P |
| 13.4.5 | Interconnections between parts of the PCE | | P |
| 13.5 | Openings in enclosures | | N/A |
| 13.5.1 | Top and side openings | Without openings | N/A |
| | Openings in the top and sides of ENCLOSURES shall be so located or constructed that it is unlikely that objects will enter the openings and create hazards by contacting bare conductive parts. | | N/A |
| 13.6 | Polymeric Materials | | P |
| 13.6.1 | General | Approved PV and AC connectors | P |
| 13.6.1.1 | Thermal index or capability | | P |

| IEC 62109-1 | | | |
|-------------|---|---|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| 13.6.2 | Polymers serving as enclosures or barriers preventing access to hazards | | P |
| 13.6.2.1 | Stress relief test | | P |
| 13.6.3 | Polymers serving as solid insulation | Approved PV connectors AND AC connectors used | P |
| 13.6.3.1 | Resistance to arcing | | P |
| 13.6.4 | UV resistance | | P |
| | Polymeric parts of an OUTDOOR ENCLOSURE required for compliance with this standard shall be sufficiently resistance to degradation by ultra-violet (UV) radiation | | P |
| 13.7 | Mechanical resistance to deflection, impact, or drop | | P |
| 13.7.1 | General | | P |
| 13.7.2 | 250-N deflection test for metal enclosures | | P |
| 13.7.3 | 7-J impact test for polymeric enclosures | For LCD panel | P |
| 13.7.4 | Drop test | | N/A |
| 13.8 | Thickness requirements for metal enclosures | | P |
| 13.8.1 | General | Conformity is checked by the test as specified in clause 13.7 | P |
| 13.8.2 | Cast metal | | N/A |
| 13.8.3 | Sheet metal | | N/A |
| 14 | COMPONENTS | | P |
| 14.1 | General | See appended table 14 | P |
| | Where safety is involved, components shall be used in accordance with their specified RATINGS unless a specific exception is made. They shall conform to one of the following: | | P |
| | a) applicable safety requirements of a relevant IEC standard. Conformity with other requirements of the component standard is not required. If necessary for the application, components shall be subjected to the test of this standard, except that it is not necessary to carry out identical or equivalent tests already performed to check conformity with the component standard; | | P |
| | b) the requirements of this standard and, where necessary for the application, any additional applicable safety requirements of the relevant IEC component standard; | | P |

| IEC 62109-1 | | | |
|-------------|--|--|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | c) if there is no relevant IEC standard, the requirements of this standard; | | P |
| | d) applicable safety requirements of a non-IEC standard which are at least as high as those of the applicable IEC standard, provided that the component has been approved to the non-IEC standard by a recognized testing authority. | | P |
| | Components such as optocouplers, capacitors, transformers, and relays connected across basic, supplemental, reinforced, or double insulation shall comply with the requirements applicable for the grade of insulation being bridged, and if not previously certified to the applicable component safety standard shall be subjected to the voltage test of 7.5.2 as routine test. | | P |
| 14.2 | Motor Over temperature Protection | | P |
| | Motors which, when stopped or prevented from starting (see 4.4.4.3), would present an electric shock HAZARD, a temperature HAZARD, or a fire HAZARD, shall be protected by an over temperature or thermal protection device meeting the requirements of 14.3. | | N/A |
| 14.3 | Over temperature protection devices | | N/A |
| 14.4 | Fuse holders | | N/A |
| 14.5 | MAINS voltage selecting devices | | N/A |
| 14.6 | Printed circuit boards | | P |
| | Printed circuit boards shall be made of material with a flammability classification of V-1 of IEC 60707 or better. | PCB material approved by UL with UL94 V-0 rating | P |
| | This requirement does not apply to thin-film flexible printed circuit boards that contain only circuits powered from limited power sources meeting the requirements of 9.2. | | N/A |
| | Conformity of the flammability RATING is checked by inspection of data on the materials. Alternatively, conformity is checked by performing the V-1 tests specified in IEC 60707 on three samples of the relevant parts. | | N/A |
| 14.7 | Circuits or components used as transient overvoltage limiting devices | | N/A |
| | If control of transient overvoltage is employed in the equipment, any overvoltage limiting component or circuit shall be tested with the applicable impulse withstand voltage of Table 7-10 using the test method from 7.5.1 except 10 positive and 10 negative impulses are to be applied and may be spaced up to 1 min apart. | | N/A |
| 14.8 | Batteries | | N/A |

| IEC 62109-1 | | | |
|-------------|---|-----------------|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | Equipment containing batteries shall be designed to reduce the risk of fire, explosion and chemical leaks under normal conditions and after a single fault in the equipment including a fault in circuitry within the equipment battery pack. | | N/A |
| 14.8.1 | Battery Enclosure Ventilation | | N/A |
| 14.8.1.1 | Ventilation requirements | | N/A |
| 14.8.1.2 | Ventilation testing | | N/A |
| 14.8.1.3 | Ventilation instructions | | N/A |
| 14.8.2 | Battery Mounting | | N/A |
| | Compliance is verified by the application of the force to the battery's mounting surface. The test force is to be increased gradually so as to reach the required value in 5 to 10 s, and is to be maintained at that value for 1 min. A non-metallic rack or tray shall be tested at the highest normal condition operating temperature. | | N/A |
| 14.8.3 | Electrolyte spillage | | N/A |
| | Battery trays and cabinets shall have an electrolyte-resistant coating. | | N/A |
| | The ENCLOSURE or compartment housing a VENTED BATTERY shall be constructed so that spillage or leakage of the electrolyte from one battery will be contained within the ENCLOSURE and be prevented from: | | N/A |
| | a) reaching the PCE outer surfaces that can be contacted by the USER | | N/A |
| | b) contaminating adjacent electrical components or materials; and | | N/A |
| | c) bridging required electrical distances | | N/A |
| 14.8.4 | Battery Connections | | N/A |
| | Reverse battery connection of the terminals shall be prevented if reverse connection could result in a hazard within the meaning of this Standard | | N/A |
| 14.8.5 | Battery maintenance instructions | | N/A |
| | The information and instructions listed in 5.3.4.1 shall be included in the operator manual for equipment in which battery maintenance is performed by the operator, or in the service manual if battery maintenance is to be performed by service personnel only. | | N/A |
| 14.8.6 | Battery accessibility and maintainability | | N/A |

| IEC 62109-1 | | | |
|-------------|---|--|---------|
| Clause | Requirement + Test | Result - Remark | Verdict |
| | Battery terminals and connectors shall be accessible for maintenance with the correct TOOLS. Batteries with liquid electrolyte, requiring maintained shall be so located that the battery cell caps are accessible for electrolyte tests and readjusting of electrolyte levels. | | N/A |
| 15 | Software and firmware performing safety functions | All software or firmware limits or controls were disabled during single-fault test, annex B, B.1.1 A) was considered | P |

| 4.4.4.13 Mis-wiring with incorrect phase sequence or polarity | | | | | | |
| 36. | Output L - N | -- | Reverse polarity before start up | 3min | Unit normal operation. No damage, no hazard, no fire. | |
| Remarks: | | | | | | |
| Abbreviations APS:auxiliary power supply, EM: error message , EUT: equipment under test, SC short circuit, OP: open circuit, O/L: Overloaded EUT shut down: EUT not connect to Grid ,cease to export power to Grid, the relay is opened. EUT standby: EUT connect to Grid ,cease to export power to Grid, the relay is closed. | | | | | | |
| During the test: Fire can not propagates beyond the EUT; Equipment shall not emitt molten metal; Enclosures shall not deform to cause non-compliance with the standard. Dielectric test is made on RI and BI between Pri. circuit and protective earthing terminal after the test. No Backfeed voltage on the test | | | | | | |

| Appendix2-IEC 60529: 1989+A1:1999 +A2:2013 | | | |
|--|---|------------------------------|---------|
| Clause | Requirement / Test | Result / Remark | Verdict |
| 12 | Tests for protection against access to hazardous parts indicated by the first characteristic numeral | No opening on enclosure | P |
| 12.1 | Access probes | | N/A |
| | Access probes to test the protection of persons against access to hazardous parts are given in table 6. | | N/A |
| 12.2 | Test conditions | | N/A |
| 12.3 | Acceptance conditions | | P |
| 12.3.1 | For low-voltage equipment (rated voltages not exceeding 1 000 V a.c. and 1 500 V d.c.) | | P |
| | The access probe shall not touch hazardous live parts. | | P |
| 12.3.2 | For high-voltage equipment (rated voltages exceeding 1 000 V a.c. and 1 500 V d.c.) | | N/A |
| 12.3.3 | For equipment with hazardous mechanical parts: | No hazardous mechanical part | N/A |
| | The access probe shall not touch hazardous mechanical parts | | N/A |
| 13 | Tests for protection against solid foreign objects indicated by the first characteristic numeral | No opening on enclosure | P |
| 13.1 | Test means and the main test conditions are given in Table 7 | | P |
| 13.2 | Test conditions for first characteristic numerals 1, 2, 3 and 4. | | N/A |
| 13.3 | Acceptance conditions for first characteristic numerals 1, 2, 3 and 4. | | N/A |
| 13.4 | Dust test for first characteristic numerals 5 and 6 | | P |
| 13.5 | Special conditions for first characteristic numeral 5 | | N/A |
| 13.6 | Special conditions for first characteristic numeral 6 | | P |
| | Enclosure be deemed category 1 | | P |
| | After test, no deposit of dust inside the enclosure | no deposit of dust | P |
| 14 | Test for protection against water indicated by the second characteristic numeral | | P |
| 14.1 | The test means and the main test conditions are given in Table 8 | | P |
| 14.2 | Test conditions | | P |
| | Water temperature not differ by more than 5K form the temperature of the specimen during the tests for IPX1 to IPX6 | | P |
| | Pressure balance provided if more than 5K below the temperature of specimen | | N/A |
| 14.2.1 | Test for second characteristic numeral 1 with the drip box | | N/A |
| 14.2.2 | Test for second characteristic numeral 2 with the drip box | | N/A |
| 14.2.3 | Test for second characteristic numeral 3 with oscillating tube or spray nozzle | | N/A |

| Appendix2-IEC 60529: 1989+A1:1999 +A2:2013 | | | |
|--|---|------------------|---------|
| Clause | Requirement / Test | Result / Remark | Verdict |
| 14.2.4 | Test for second characteristic numeral 4 with oscillating tube or spray nozzle | | N/A |
| 14.2.5 | Test for second characteristic numeral 5 with the 6,3mm nozzle | | P |
| | The test is made by spraying the enclosure from all practicable directions with a stream of water from a standard test nozzle under following conditions: | | P |
| | a) Internal diameter of the nozzle: 6,3mm | | P |
| | b) Delivery rate: 12,5l/min ±5% | | P |
| | c) Water pressure: adjusted to achieve the specified delivery rate | | P |
| | d) Core of the substantial stream: circle of approximately 40mm diameter at 2,5m distance from nozzle | | P |
| | e) Test duration per square metre of enclosure surface area likely to be sprayed: 1min | | P |
| | f) Minimum test duration: 3min | | P |
| | g) Distance from nozzle to enclosure surface: 2,5-3m | | P |
| 14.2.6 | Test for second characteristic numeral 6 with the 12,5mm nozzle | | N/A |
| 14.2.7 | Test for second characteristic numeral 7: temporary immersion between 0,15m and 1m | | N/A |
| 14.2.8 | Test for second characteristic numeral 8: continuous immersion subject to agreement | | N/A |
| 14.3 | Acceptance condition | No water entered | P |
| | If any water has entered, it shall not: | No water entered | N/A |
| | a) be sufficient to interfere with the correct operation of the equipment or impair safety; | | N/A |
| | b) deposit on insulation parts where it could lead to tracking along the creepage distances; | | N/A |
| | c) reach live parts or windings not designed to operate when wet | | N/A |
| | d) accumulate near the cable end or enter the cable if any | | N/A |
| 15 | Tests for protection against access to hazardous parts indicated by the additional letter | | N/A |
